

AHMAD DIMACHKIE

London, United Kingdom | +44 7832 253191 | ahmad.dimashkie@gmail.com | [LinkedIn](#) | [Github](#) | [E-Portfolio](#)

Education

American University of Beirut (AUB)

Bachelor of Engineering, Computer and Communications Engineering

• Dean's Honor List (GPA: 4.0/4.0) | Minor in Business Administration (GPA: 4.0/4.0)

Beirut, Lebanon

Sep 2021 – May 2025

University of Toronto (UofT)

Exchange student

• Completed key courses: Intro to Machine Learning, Advanced Algorithms, Programming Languages (GPA: 3.82/4.0)

Toronto, Canada

Sep 2023 – Dec 2023

Professional Experience

Amazon

Software Development Engineer

- Optimized data filtering pipelines for a GenAI internal project by delegating filtering logic to APIs and streamlining AWS Lambda functions this expanded input scope by 13 categories and reduced infrastructure costs and query response time
- Worked on both the frontend and backend of a GenAI assistant that automatically identifies the root cause of operational incidents; leveraged the ReAct reasoning framework and LLMs to save 100s of engineer hours annually
- Created development environments and stacks using AWS CloudFormation to integrate testing in the CI/CD pipeline this prevented production issues and reduced debugging time while maintaining high test coverage
- Set up CloudWatch alarms to track Lambda performance metrics and connected them to the internal ticketing system. The automated alerts now reach on-call engineers by severity level, improving incident resolution time by 5+ hours

London, United Kingdom

Sep 2025 – Present

CME

Fullstack Software Developer Intern

- Designed and implemented a user-friendly and responsive frontend interface from scratch using ReactJS, HTML, and CSS
- Developed the backend using the Django framework and implemented more than 20 REST APIs with robust error handling and logging
- Created a scalable NoSQL database using MongoDB to store, retrieve and organize large documents efficiently across 5+ file formats
- Integrated Firebase for secure user authentication and authorization, and enhanced the overall security of the application
- Collaborated with a team of 5 leveraging agile methodologies and SCRUM meetings to integrate NLP, GenAI and web scraping features

Beirut, Lebanon

Jun 2024 – Jul 2024

Technical Projects

NeuroShield – Final Year Project | Python, Bandit, NodeJS, React, MongoDB

Aug 2024 – May 2025

- Implemented a static code analysis pipeline using Bandit, a Python SAST tool, for line-by-line security scanning achieving 100% code coverage of the user codebase and integrating it into the platform's threat analysis framework for automated vulnerability detection
- Built an integration layer via subprocesses to run Bandit scans, parse outputs, and store results efficiently in MongoDB
- Captured 5 vulnerability metadata (line number, type, severity, confidence and documentation link) for each issue detected
- Developed 6 frontend features for users to upload code, run scans, download PDF reports and view results in a dashboard
- Nominated to the 2025 IDEAS competition at AUB MSFEA, where NeuroShield was presented to a jury of professors and experts through a live demo and poster session, showcasing its technical AI and Cybersecurity innovation, won 2nd place out of 30 contestants

Unifind | AWS, React, Bootstrap, Flask

May 2024 – Aug 2024

- Collaborated with 2 Amazon Software Engineers through the Amazon Industry Program to develop a website that gathers and displays information about more than 5 universities in Lebanon, that helped school graduates find their ideal university in one centralized website
- Utilized more than 5 AWS services, including AWS Amplify for hosting, AWS Lambda for backend functions, API Gateway for API management, AWS Bedrock for chatbot integration, and DynamoDB for the database throughout the whole project
- Built the frontend using React with the Bootstrap framework and developed the backend using Flask for easy integration with AWS Services
- Presented the project through a dynamic demo at the closing ceremony led by WIE x Amazon in presence of the jury of 10 Amazon leaders

Multi-platform Exchange Tracker | Python, React, Flask, MySQL, Machine Learning

Jan 2024 – May 2024

- Designed and implemented the backend of an exchange tracker platform, enabling user balance management and transfers, while handling user management features such as email notifications for password recovery across 3 platforms
- Developed a time series forecasting RNN by finetuning it on the LBP-USD black market exchange rate to predict rates up to 20 days
- Generated 4+ statistical metrics (standard deviation, mean, median...) on exchange rates and visualized fluctuation trends through graphs

Leadership & Extracurricular Activities

Institute of Electrical and Electronic Engineers (IEEE) – AUB Chapter

Webmaster and Event Officer

- Led the club's website development using WordPress and worked with the cabinet to enhance the presence for 500+ members
- Contributed to initiatives beyond web development by engaging in event planning and community building efforts in the AUB campus

Beirut, Lebanon

Aug 2024 – May 2025

Association for Computing Machinery (ACM)

Project Member

- Chosen from over 400 applicants to work on a project enhancing the AUB experience with the mentorship of a Meta Software Engineer
- Engaged in programming sessions and events while networking with fellow programmers and enhancing my technical skills

Aug 2024 – May 2025

Skills & Interests

Languages: English (*Fluent*), French (*Fluent*), Arabic (*Native*)

Technical skills: Python, JavaScript, React, Flask, Node.js, HTML, CSS, WordPress, RestAPI, AWS, AWS Lambda, AWS Cloudformation, PostgreSQL, MySQL, MongoDB, SQL, NoSQL, GenAI, LLMs

Interests: Volunteering (AUB UNICEF Club), Squash, Basketball, Swimming, Travelling, Padel, Ping-Pong
